

## Section Three

# Numerical Data

Complete the Following Tasks

### Task 1 Answer

Python 3 no longer has a limit on integer size. If you exceed a limit in other languages, an overflow occurs. This causes the bits to be sliced off, creating a new number

### Task 2 Answer

A number you type directly into code

### Task 3 Answer

```
print(0b100001)
```

### Task 4 Answer

The underscore can be used to make a number more readable. Similar to why you might use a comma in a number
