Section Nine
Functions

Complete the Following Tasks

Task 1

What are functions? Why use them?

Task 2

Write a function that accepts a list of words and a single character. The function should return the same list, but only contain the words that begin with the character that was also passed in. No additional data objects should be created

Task 3

Create a generator function that accepts two parameters that indicate a range and returns the odd numbers in a list that exists between that range
